WHAT'S WORKING

ASSET	SCORE	WHY IT MATTERS
AI Crawler access	100/100	All 12 AI bots allowed — GPTBot, ClaudeBot, PerplexityBot, Google-Extended
FAQ page citability	86/100	21 Q&As with specific prices, timelines, guarantees — best page on the site
Product specs block	90/100	Frame spec, weight, wind rating, assembly time — most AI-citable block on the whole site
Triple refund guarantee	Strong	Specific, quantified, contractual — rare in the industry and very citable
Static HTML rendering	100%	All content in raw HTML source — AI crawlers read everything without JS execution
Image alt text	100%	All images have alt text — strong multimodal signal for Google Gemini
Trustworthiness (E-E-A-T)	21/25	HTTPS, Privacy Policy, Wind Policy, transparent FAQ — highest E-E-A-T dimension

CRITICAL ISSUES

- ! **Zero structured data on all 10 pages** Schema: 5/100

No JSON-LD anywhere. AI Overviews, rich results, and Knowledge Graph all require schema markup. LocalBusiness, FAQPage, Product, Review schemas all missing.
- ! **No external brand presence** Brand: 10/100

No Google Business Profile, no WeddingWire, no Reddit mentions, no YouTube, no LinkedIn (404), no press. AI models querying "flower wall Toronto" have zero external data to verify FLORINSKY exists.
- ! **Social links in footer are all href="#" placeholders** 5 min fix

Instagram, Facebook, Pinterest icons all link to "#". This actively signals to AI entity graphs that no social presence exists. Quick fix, high impact.
- ! **No canonical tags on any page** 30 min fix

All 10 pages missing <link rel="canonical">. URL variants (index.html vs /, HTTP vs HTTPS) can fragment link equity.
- ! **Hero video 15 MB — will fail Core Web Vitals LCP** LCP fail

No poster attribute, no preload, 15 MB source file. On mobile this is a critical LCP failure. Target: <3 MB + add poster image.

! **FAQ answers rendered via JS accordion — may be invisible to Perplexity** Perplexity gap

Perplexity AI performs limited JS execution. FAQ answer text must be present in raw HTML source. JS can hide/show it visually, but the text must exist in the DOM before JS runs.

AI PLATFORM READINESS

PLATFORM	SCORE	BIGGEST GAP
Google AI Overviews	35/100	No JSON-LD; FAQ content JS-gated
Google Gemini	32/100	No Google Business Profile; no NAP data
Bing Copilot	22/100	Not registered in Bing Webmaster Tools
Perplexity AI	20/100	No Reddit presence; JS-gated FAQ
ChatGPT Web Search	18/100	No entity recognition; social links are placeholders

PRIORITY ACTIONS — THIS WEEK

- 1 Replace all href="#" social links with real URLs** 30 min
Footer Instagram/Facebook/Pinterest. Affects all 4 AI platforms for entity recognition.
- 2 Add canonical tags to all 10 pages** 30 min
<link rel="canonical" href="https://florinsky.ca/[page].html"> in every <head>
- 3 Fix og:image to absolute URL on index.html** 5 min
Change "assets/hero-flower-wall.jpg" → "https://florinsky.ca/assets/hero-flower-wall.jpg". Social sharing is broken today.
- 4 Create /llms.txt file** 30 min
Template ready. Gives AI crawlers a structured map of the site. 30 minutes, immediate effect.
- 5 Add favicon** 15 min
No <link rel="icon"> on any page. Blank browser tabs reduce trust perception.
- 6 Add poster attribute to hero video** 15 min
<video poster="assets/hero-flower-wall.jpg" ...>. LCP renders immediately while video loads in background.
- 7 Register Bing Webmaster Tools** 30 min
Add msvalidate.01 meta tag. Enables Bing/Copilot indexing verification and IndexNow API.

PRIORITY ACTIONS — THIS MONTH

- 8 Create Google Business Profile + collect 15+ reviews** 3 hours
Highest ROI action. Google Gemini and AI Overviews pull GBP data directly. 15 reviews in 60 days transforms the Brand score.
- 9 Add LocalBusiness JSON-LD to index.html** 2 hours
Schema ready from audit. Include name, areaServed, sameAs (social URLs), hasOfferCatalog. Affects Google AIO, Gemini, Copilot.
- 10 Add FAQPage JSON-LD to faq.html** 1 hour
All 21 Q&As already extracted and ready. Paste the generated schema. Direct impact on all AI platforms for FAQ queries.
- 11 Add OG + Twitter Card tags to all 9 inner pages** 1 hour
Only index.html has OG tags. gallery, product, about, faq, advantages, kind-words, client-care, privacy, terms all missing.
- 12 Make FAQ answers server-rendered (not JS-only)** 2 hours
Move answer text into HTML. JS can still control open/close behaviour, but text must be in the DOM source for Perplexity and AIO.
- 13 Compress hero video to <3 MB + convert 3 large PNGs to WebP** 2 hours
cover-3.png (7 MB), cover-4.png (6.6 MB), product-outdoor.png (9.6 MB) → WebP. Expected 60-80% size reduction.
- 14 Register on WeddingWire.ca + TheKnot Canada** 2 hours
Free listings. These are the platforms AI models query when answering "best flower wall Toronto". Without a listing, FLORINSKY is simply not in the answer pool.
- 15 Create LinkedIn company page** 1 hour
Currently returns 404. LinkedIn is a sameAs entity recognition signal used by ChatGPT and Bing Copilot.
- 16 Expand About page to 1,500+ words** 3 hours
Currently ~350 words. Add: event count served, Real Touch sourcing process, design methodology, team bios, brand origin story with specifics.
- 17 Add "300+ events served" to homepage** 5 min
One sentence. Transforms vague experience claim into a citable specific fact for AI models.
- 18 Expand title tags to 50-60 chars with location** 30 min
All titles 25-36 chars. Example: "FLORINSKY — Flower Wall Rental Toronto & GTA | Premium Backdrops" (58 chars).

LLMS.TXT — READY TO DEPLOY

Create this file at <https://florinsky.ca/llms.txt>

FLORINSKY Atelier

- > Premium luxury flower wall rental for weddings and events in Toronto and the Greater Toronto
- > Founded by Ruslan Orlinsky, professional wedding photographer with 19 years of industry exper

72

Good

Main insight: The site proves the product is real and well-engineered. The gap is that AI models have no external data to confirm the brand exists. Google Business Profile + WeddingWire listings + real social links fix the largest single score drag (Brand: 10 → 45+) and are all achievable in one weekend.
